LA12X AMPLIFIED CONTROLLER

- 12,000 W with record hold times
- DSP controlled universal SMPS
- Advanced Power Factor Correction
- 4 in x 4 out architecture
- Boosted DSP resources
- AVB/TSN-ready

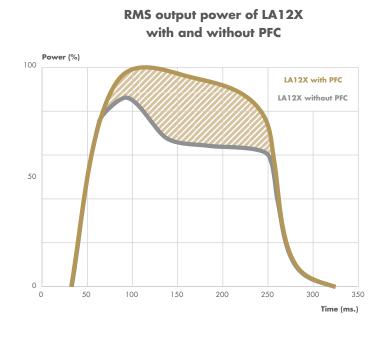

POWER SUPPLY

The LA12X relies on a proprietary switch mode power supply (SMPS) equipped with a DSP-controlled PFC, capable of delivering 12,000 W regardless of mains voltages (from 240 V down to 100 V.)

The PFC offers high immunity to unstable mains and lowers typical power consumption by up to 40% for the same usage conditions i.e., more power is available to the output stages from a given circuit (16 A at 230 V mains, 30 A at 120 V mains).

In addition to the high raw RMS power rating, the ability to deliver energy (power x hold time) yields the best performance from loudspeaker systems, especially in LF reproduction.

I/O

The four LA12X inputs are available in analogue, AES and AVB. Four cascaded 24-bit and 96 kHz A/D converters at the front-end yield an impressive encoding dynamic of 130 dB. AES/EBU digital inputs operate with sample rate converters from 44.1 kHz to 192 kHz. Automatic fallback functions make the creation of redundant audio paths possible with constant delay and constant level.

Engineer Workflow Tools

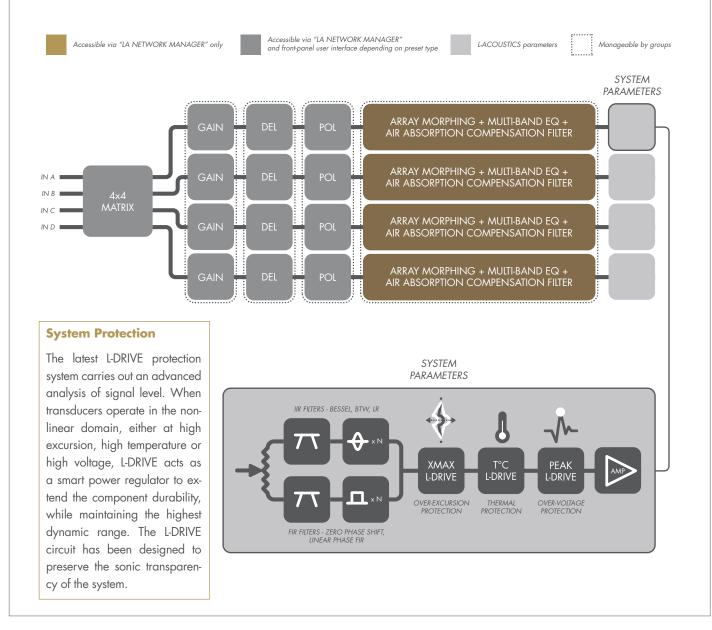

Positioned after the DSP block dedicated to gain, delay and polarity adjustment of the system, the advanced DSP tools can be used along the live engineering workflow, comprising three steps from overall system settings to specific adjustments:

Operating at 96 kHz with 32 bit float precision, the DSP combines IIR and FIR filters to generate perfectly linearized phase curves and significantly improved impulse responses for an even, more natural, transparent and realistic sound experience.

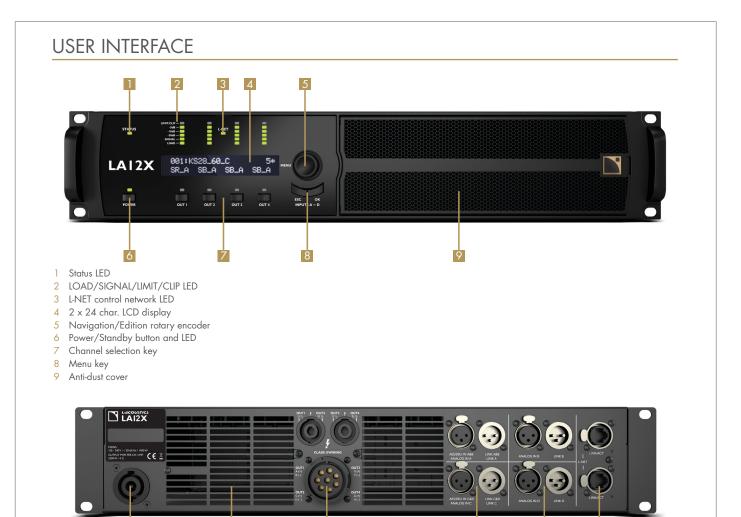

First, setting the frequency response of the line source with Array Morphing: the System Engineer can easily achieve the same tonal balance for different geometry line source arrays and combine different line source speakers in the same installation while offering the same sonic signature.

Second, ensuring the linearization of HF using plateau FIR filters and the air absorption compensation filter. In long throw applications, high frequency propagation can be strongly affected by air absorption. Compensation of this phenomenon re-establishes the original frequency response of loudspeaker enclosures, up to a limit dictated by the need to preserve a maximum of the driver resources.

Third, tweaking the system response (EQ station features) using the pool of 8 IIR filters to fine tune the system within its environment and notch out frequencies.

* The number of connections corresponds either to the number of passive enclosures or the number of sections for active speakers.

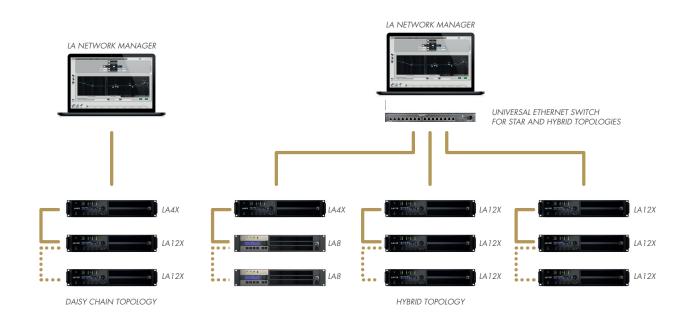

SOFTWARE AND NETWORK

The design of complex systems is made possible by the integration of the L-NET Ethernet-based network. Thanks to its high speed data transfer protocol of 1 Gbit/s, up to 253 units can be controlled and monitored in real-time by the LA Network Manager software. Multiple network topologies such as daisy-chain, star, and hybrid, are quickly and easily configurable for full flexibility in the required system architecture. The computer running LA Network Manager and the units are connected to each other by using industry standard CAT5e U/FTP fitted cables.

Optimized for Mac[®] and Windows[®] platforms, LA Network Manager relies on a purely graphical approach and allows amplified controller units and groups to be dragged and dropped in a workspace that reflects their location in the field. It is designed to quickly take the user through the workflow process of Setup, Tuning, and Live by implementing the tools required for each task into the dedicated page for each process. An advanced network engine allows automatic discovery of connected units. Multiple-group assignation capability, comprehensive real-time monitoring with event logging, as well as numerous productivity tools underpin the remarkably practical and application oriented network management software.

For third party management solutions, L-Acoustics provides SNMP support to facilitate the integration via third party control and monitoring systems. As a certified member of the CRESTRON[®] and EXTRON[®] partner programs, L-Acoustics also provides software modules allowing control integration into their automation systems, for ultimate convenience in cultural and event centers, universities, houses of worship, sport facilities, etc.

AMPLIFIED CONTROLLERS - THE RANGE

L-Acoustics amplified controllers offer high performance and efficient loudspeaker amplification, digital signal processing and comprehensive system protection in a single ergonomic package. The onboard preset library allows for rapid system optimization with minimum EQ correction and delivers a unique sonic signature across all L-Acoustics systems.

LA4X: Amplified controller with DSP

4 x 1000 W @ 8 ohms 4 inputs x 4 outputs architecture

LA8: Amplified controller with DSP 4 x1800 W @ 4 ohms 2 inputs x 4 outputs architecture

LA12X: Amplified controller with DSP 4 x 3300 W @ 2.7 ohms 4 inputs x 4 outputs architecture

ACCESSORIES

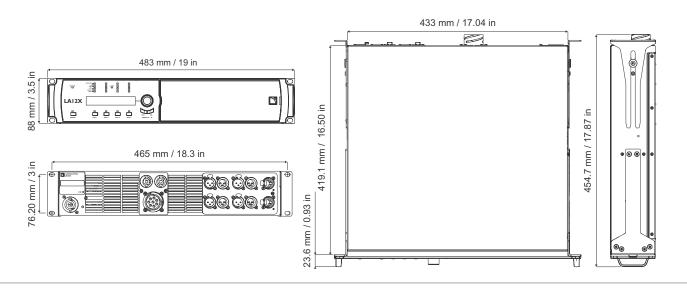

LA-RAK II: Touring rack with three LA12X, with power, audio and network distribution

L-CASE: Transport and operation case for electronics Capacity: single 2U amplified controller

DIMENSIONS

SPECIFICATIONS

Temperature	Room temperature from 0° C / 32° F to +50° C / 122° F
Amplification and power supply	
Amplification class	Class D
Output power CEA-2006 / 490A (1% THD, 1 kHz, all channels driven)	
Corpor power CER2000 / 470R (1/0 HTD, 1 KHZ, dir channels driven)	
	4 x 2600 W RMS (at 4 Ω) 4 x 3300 W RMS (at 2 7 Ω)
Power supply model	4 x 3300 W RMS (at 2.7 Ω) Universal Switched Mode Power Supply (SMPS) with Power Factor Correction (PFC)
,	
Power factor	> 0.9
Mains rating	100 V - 240 V ~ ±10%, 50-60 Hz
Nominal current requirements	30 A for 100-120 V, 16 A for 200-240 V
Audio specifications	
Frequency response	20 Hz - 20 kHz, \pm 0.1 dB (at 8 $\Omega,$ 60 W output power)
	20 Hz - 20 kHz, ± 0.1 dB (at 4 Ω, 120 W output power)
Distortion THD+N (20 Hz - 10 kHz)	< 0.05% (at 8 Ω, 60 W output power)
	< 0.1% (at 4 Ω, 120 W output power)
Output dynamic range (20 Hz - 20 kHz, 8 Ω, A-weigthed)	> 114 dB
Noise level (20 Hz - 20 kHz, 8 Ω, A-weigthed)	< - 72 dBV
Channel separation (at 1 kHz , 4 Ω)	> 85 dB
Latency (for both analog and digital inputs)	Standard operating mode: 3.84 ms
calone, no. boin analog and algina inpula	Low latency operating mode: 0.76 ms
DSP	
	2 x SHAPC 32 hit floating point Q6 kHz appelias sets
Digital Signal Processor (DSP)	2 x SHARC 32-bit, floating point, 96 kHz sampling rate
I/O routing	Flexible 4x4 routing matrix
Per output channel	Built-in EQ station with 8 IIR, 3 FIR EQ filters
	Array morphing (LF contour, zoom factor)
	Air absorption compensation filters
	Internal IIR and FIR EQ algorithms for speaker phase linearization and improved impulse responses
	L-DRIVE protection (excursion, temperature and over-voltage)
Output delay	0 ms to 1000 ms
Transducers protection	L-DRIVE: excursion / temperature / over-voltage
Circuits protection	
Mains and power supply	Over and under voltage / over temperature / overcurrent (fuse protection, and inrush current protect
Power outputs	Over current / DC / short circuit / rail over and under voltage / over temperature
Cooling	Cooling fans with temperature control speed
Inputs	
Analog: 4 balanced analog line inputs with passively conne	sted link
A/D conversion	4 cascaded 24-bit analog/digital converters (130 dB dynamic range)
Input impedance	22 kΩ (balanced)
	22 dBu (balanced, THD 1%)
Max input level	
Max. input level Digital: 2 AFS/FBU inputs (4 channels) with electronically by	
Digital: 2 AES/EBU inputs (4 channels) with electronically bu	ffered link and failsafe relay
